CLOUD AND NETWORKING

Built for the modern workplace...

Empower your team to work faster, smarter, and more securely — wherever they are.

What Is Cloud and Networking?

Our Cloud and Networking services ensure your business runs on fast, secure, and scalable infrastructure — whether you're in the office, on set, or working remotely.
We design, manage, and optimise cloud environments, Wi-Fi networks, and business connectivity to keep your team productive and your data secure.

Why It Matters

Work Anywhere, Stay Connected
Cloud tools and secure remote access keep your team productive from any location, ideal for hybrid and creative workflows.

Faster, Smarter Networks
We optimise your network performance to eliminate bottlenecks and support high-bandwidth tools like video editing and large file transfers.

Stronger Security
Built-in firewalls, access controls, and data encryption help prevent breaches and support compliance requirements.

Who Is Marshall?

Marshall has supported creative businesses since 2009, combining strong cybersecurity with smart, flexible tech for modern teams.

What We Deliver

- Microsoft 365, Google Workspace, and cloud migration
- Wi-Fi and LAN network design, installation and support
- VPNs and remote access configuration
- Cloud storage and file-sharing solutions
- Network security and firewall setup
- Ongoing management and support

What You Receive

- A tailored cloud and networking setup that fits your workflow
- Improved connectivity and reduced downtime
- Secure and scalable infrastructure
- Expert support from a London-based team
- Proactive monitoring and issue resolution
