Onsite BACKUP AND RECOVERY

A safety net you control.

Protect your business with fast, local backups - because cloud retention isn't enough.

What Is Onsite Backup?

Onsite Backup stores your business data locally, on secure, dedicated infrastructure at your premises. It gives you instant access to recent files, fast recovery times, and peace of mind knowing you control your own backups.
Cloud platforms like Microsoft 365 and Google Workspace only retain deleted files for 30 days. Onsite Backup protects you long after that, with no reliance on internet access or third-party storage.

Why It Matters

Quick Recovery, Minimal Downtime
Restore files, folders, or entire systems in minutes, no waiting on cloud downloads or bandwidth limits.

Extended Data Retention
Keep access to your files well beyond the 30-day window offered by Microsoft and Google.

Offline Access and Control
Even if your internet goes down, your data is safe, local, and fully accessible.

What We Back Up

- Microsoft 365 and Google Workspace data
- Workstations, laptops and servers
- Project files, archives and drives
- Operating systems and software setups
- Local databases and specialist applications

What You Receive

- Dedicated backup hardware (configured by us)
- Scheduled daily or real-time backups
- Data encryption and physical access control
- Easy-to-use restore options
- Ongoing support, monitoring and testing

Who Is Marshall?

Marshall has supported creative businesses since 2009, combining strong cybersecurity with smart, flexible tech for modern teams.
